## Objective and Investment Policy

The Sub-fund is a passively managed index-based UCITS. The Sub-fund's objective is to replicate, both upwards and downwards, the performance of the MSCI Emerging Markets Net Total Return Index (net dividends reinvested) (the "Benchmark"), denominated in US dollars (USD) and representative of the performance of large- and mid-cap companies in all developed countries, while minimising the tracking error between the Fund's performance and that of the Benchmark. The expected level of the Tracking Error under normal market conditions is indicated in the Fund prospectus. More detailed information on MSCI indices is available on the MSCI website ([www.msci.com](http://www.msci.com)). The Sub-fund aims to achieve its objective by means of indirect replication, namely by entering into one or more OTC swaps (forward financial instruments, "FFIs"). The Sub-fund may invest in a diversified portfolio of international shares whose performance will be exchanged against that of the Benchmark through FFIs. The updated composition of the portfolio of securities held by the Sub-fund is mentioned on the website [amundiETF.com](http://amundiETF.com). In addition, the indicative net asset value appears on the Sub-fund's Reuters and Bloomberg pages and may also be mentioned on the Sub-fund's stock exchange websites.

The higher the volatility, the higher the risk. The Tracking Error indicator measures the performance's difference between the fund and the benchmark

\* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield**. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you. Additional risks: Market liquidity risk could amplify the variation of product performances.
